Notes for Board Design

When using a crystal resonator, place the resonator and its load capacitors as close as possible to SUB_in and SUB_out pins.

Other signal lines should be routed away from the resonator circuit to prevent induction from interfering with correct oscillation (see figure 2).

Figure 2 Example of Incorrect Board Design

Remark When using the subsystem clock, insert resistors R_d in series on the SUB_out side.

Where Cs(=2 to 4pF) Stands for stray capacitance of the circuit.

Cos : X1_X2 Stray capacitance

Resonator circuit constants will differ depending on the resonator element, stray capacitance in its interconnecting circuit, and other factors. Suitable constants should be determined in consultation with the resonator element manufacturer.
